

Union Jammed By Hundreds

Several hundred students jammed the McGill Union last night for the Annual Activities Night. All the clubs and societies on campus decorated booths with their wares and displayed pamphlets.

The McGill Outing Club attracted much attention when one of its members climbed down the front of the Union when a mountain could not be brought to the building. Movies were also shown by the MOC concerning the Outing Club activities.

The Amateur Radio Club also displayed a novel idea. An old-fashioned phone was connected from the second floor to the attic for communication purposes. A tape recorder was on hand, which enabled the students to listen to the artificial satellite.

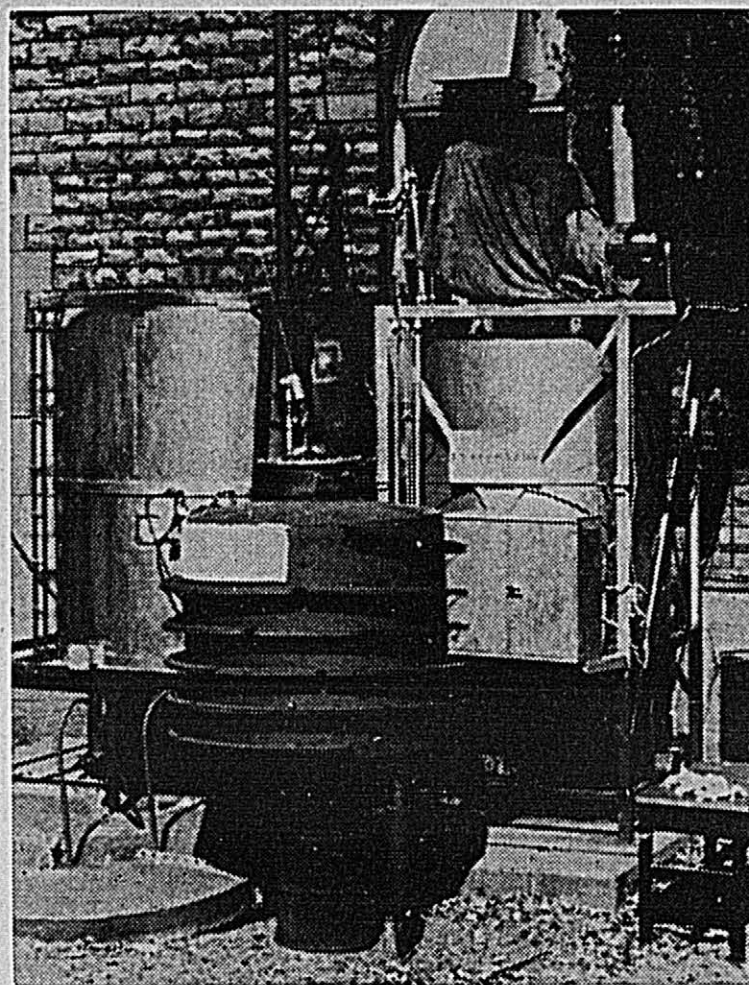

Exhibits from a large variety of clubs included those of the Riflery and Pistol Club,

Judo Club, Pre-Med Society, Folk Music Group, Literary Society, Chemical Institute, Astronomical Science Society, McGill Radio Workshop, Students' Dramatic Club sponsored by the English Department, Montegian Geology Club, Cosmopolitan Club, Film Society, Debating Union, and religious and political clubs on campus.

At the same time, a dance was held in the Union Ballroom, with music provided by the Radio Workshop. Highlighting the dance were cha-cha demonstrations by Steve Hazard and his partner, and a short program presented by the Folk Music Club.

Jackie Magnan, Chairman of Activities Night, summed the evening up by stating, "If this Activities Night is any indication of what is to follow this year, then we shall have a very extensive extra-curricular program."

Brain 'Poison' Clue To Epilepsy

Professor's Experiments Offer New Impulse Theory

A deadly poison isolated from animal brain tissue by a McGill biochemist may shed light on the mysterious trigger mechanism of epilepsy and on the equally mysterious origin of two crippling muscular diseases for which there is presently no cure.

Dr. E. A. Hosein of the Department of Biochemistry of McGill University, says in a paper prepared for delivery to the annual meeting of the Canadian Physiological Society in Ottawa tomorrow that the substance isolated has properties similar to the curare arrow-poison of South American Indians.

In experimental animals, he says, the substance has produced the symptoms and medical pattern associated in humans with epilepsy and with the two muscular diseases: myasthenia gravis and muscular dystrophy.

(Myasthenia gravis is a long-term disease characterized by loss of muscle tone and progressive paralysis. Muscular dystrophy is characterized by the wasting away of muscle tissue.)

Dr. Hosein emphasized yesterday that his work, expected to arouse wide interest among physiologists and in medical circles generally, is still in experimental stage and has been carried out only with animals. The discovery offers no present cure for epilepsy or the muscle diseases. But it does offer a clue to their origin within the human body, and in the medical field, discovery of what causes an illness is the usual first step towards its cure.

Advances New Concept of Nerve Impulses

Isolation of the curare-like substance, following a year of intense work, has led Dr. Hosein to put forward a new concept of the mechanism by which nerve impulses originating in the brain

are transmitted to the muscles.

His theory is that as part of the normal processes of living, a chemical compound, which he has now isolated and which carries the chemical name of gamma Butyrobetainyl-CoA, is released in the brain. This compound acts first as an "inhibitor" holding down nerve impulses which would otherwise activate muscles unnecessarily and thus produce involuntary twitchings and jerkings of the limbs.

Later, the same substance is transformed into a "transmitter" which permits the nerve impulses to be obeyed by the muscles.

He believes that it is a breakdown in the process by which the inhibitor is transformed into a transmitter that leads to trouble and disease. Somehow in this process the inhibitor sometimes be-

comes "uncoupled" and releases one of its components which has the chemical name of gamma Butyrobetaine. This is the curare-like substance which may be the cause of epileptic attacks and of myasthenia gravis and muscular dystrophy.

Nerve Impulses Cut Off Abruptly

The curare-like properties of the substance bear out Dr. Hosein's theory. It is well known that curare acts by abruptly cutting off nerve impulses to muscles and thus leading to swift paralysis and death.

Confirmation of his general theory is provided, Dr. Hosein said, by what is known of the action of narcotics and of the chemical changes which take place in the brain during normal sleep.

Medical Conference Ends

by David Mayerovitch

"Health Insurance and the Changing Medical Profession" was the topic of a panel discussion held Tuesday night at the Montreal General Hospital as part of the twenty-first annual conference of the Canadian Association of Medical Students and Internes.

The three-day conference, which concluded yesterday, was attended by twenty-five student delegates representing Canada's twelve medical faculties. The programme included a civic reception at St. Helen's Island, tours of the Royal Victoria and Montreal General Hospitals, and a banquet in Redpath Hall.

Dr. L.G. Stevenson, Dean of McGill's Faculty of Medicine, acted as moderator of Tuesday's discussion. Five speakers dis-

cussed various aspects of health insurance, with special reference to the forthcoming National Health Insurance Plan.

Weakness of Voluntary Schemes

Organized labour was represented by Mr. A. Andras, Assistant Director of Research for the Canadian Labour Congress, whose topic was "What Does the Public Want?". He commented on the weaknesses of voluntary health schemes, and upheld the opinion of the C.L.C.: best protection is provided by a state health plan, and anything short of that will result in inadequate coverage.

Dr. G. D. W. Cameron, Deputy Minister of Health and National Welfare, spoke on the probable

(Continued on page 2)

Weird Device Is Reactor, Not Bomb

What is it? This is a question that puzzles many an onlooker who passes by the strange mass of equipment on his or her way to lectures. Answering this question simply, Dr. K. L. Pinder, the designer and inventor of the unit, states that it is used for Solid-Liquid Separation employing an Atomized-Suspension Technique. Most of the components of the equipment are patented, although its specific purpose, still under development, is secret.

The Reactor-Condenser Unit outside the Pulp & Paper Research Institute pictured above is just one of three similar units; the other two are housed inside the building. The outside unit is gas heated and those inside are heated electrically. Dr. Pinder commented, "The units inside are more elaborate, long and thin as compared to the squat and fat unit outside." All three units are portable and are of actual commercial size. The uses of the present units have been limited to experimental work but a commercial unit is expected to be delivered within six months.

An odor was noticed last year during the three or four times of its operation; it was the result of the process, but this odor will not be apparent when the machine is put into commercial use. In other words, it won't stink.

Doctors Gauvin and Pinder designed the equipment, which was entirely built in the shops of the Institute. The outside unit was completed in three months.

One of the purposes of the machinery is for the separation of a solution of salt and water. The solution is vaporized and the salt comes off in crystal form.

Although the Pulp & Paper Research Institute has been situated on the campus for many years, little is known about it. The aim of the institute is to change the paper-making industry from an art to a science; to modernize the industry. The institute is owned and operated by 48 Canadian pulp and

Change Of Course

Students wishing to change a course for which they are registered must do so by completing the appropriate "change of course" forms available in the Assistant Dean's Office, Room 140, Arts Building. These forms (three) must be completed and turned in by the student who should call back within one week to receive his signed copy if the change is approved. Merely turning in the forms does not constitute authority for the change and it is the student's responsibility to ascertain that the change has been approved. The change of course period will extend from Tuesday, October 1st to Tuesday, October 15th and no requests whatsoever will be considered after this deadline date.

Editorials

The Booth That Wasn't There

At Activities Night last evening the Red and White Club was conspicuous by its absence, an unhappy fact that was commented on by many.

The Red and White Revue, out of which and under whose auspices "My Fur Lady" grew, has, it would seem, fallen by the wayside on the road to success. The Red and White Club was brightly heralded last February as being the father and incubator of many more similarly successful McGill productions. However, despite its forecast flight into the theatrical halls of fame it has not even become airborne.

The successes of "My Fur Lady" have brought almost continental recognition and acclaim to this university. But there are some of us who sought in "My Fur Lady" not so much a solitary triumph, but rather a simple success under whose impetus the Red and White Club would grow to be the Canadian counterpart of the Princeton Triangle and the Harvard Hasty Pudding Clubs. A success which would lead to many more successes. We sought, it appears, in vain.

McGill has its triumph, but it has no Red and White Club.

Is it too late to forge that which is lastingly valuable from the thoughtless chaos of that which is temporarily, if gloriously, famous?

"My Fur Lady" as an ingenious product of McGill talent has had its day in the sun. Give us back the Red and White Revue!

The Silent Generation

The Lost Generation cannot communicate with their children, that is why they call us the Silent Generation. We are not silent but we do not talk to our elders. For some reason we do not feel at ease talking to them.

If we mention sex, their squirming embarrassment generates discomfort in us. So silence. If we wax idealistic, they reply with Wise-Old-Man cynicism which is both unanswerable and unacceptable. So silence. When we listen to them as professors delivering a fervent lecture whose aim is to involve us in their philosophy of life, we cannot become involved because somewhere in the back of our minds we know that they belong to a generation which has failed frighteningly and therefore whose philosophy must be defective no matter how eloquently it is expressed. So we sit in the classrooms, silently, with stupid faces, and take notes. They are aliens. So silence.

This silence seems to bother our elders. They want to know what we think but because they have no direct personal contacts with the younger generation they turn to making statistical surveys of us and these surveys are somehow supposed to tell them what lies behind the mask of silence — are we innocent Ray Bradbury children plotting to murder our parents or are we just solid-citizen conformists or what? Dr. Philip Jacob is even publishing a book which is a survey of two hundred surveys of us.

Can a survey say much about a generation? No. The vast bulk of any generation is conformist, conservative. This was true of our parents. This was true of their parents. A survey cannot measure the steel of our intellectual elite because the intellectual elite are statistically insignificant in number. But not socially insignificant. They will be the ones who will lead this civilization when our turn comes. A survey cannot tell what these leaders will think or how they will act or even what they are thinking now because it cannot pick them out from the mass.

We do not want the macabre world our parents have to offer us but what we will do with the world when we have buried the Lost Generation and taken the steering wheel ourselves is not known. Statistics won't, can't say. Perhaps we will, someday, when we decide to break silence.

Letters To The Editor

Whither Nkrumah?

Sir:

I am looking for an answer to a question that has bothered me for some time. Perhaps some Ghanaian students at McGill could answer it.

Before Ghana obtained its independence, Dr. Kwame Nkrumah was looked to as the liberator, as the great leader of his country. How do his countrymen look on him now that he has become the Prime Minister and Ghana has obtained her longed for independence?

Do his countrymen have an explanation for the reason all his power seems to have gone to his head? The Queen's head no longer appears on Ghana's coinage — only Dr. Nkrumah's head. The Prime Minister has ordered the erection, in the capital city of Accra, of statues of himself. Marble statues at that. Freedom of speech seems to have disappeared from the country. Anyone, and especially newsmen, who criticizes the government is politely asked to leave the country.

Perhaps there are reasons for Dr. Nkrumah's actions. I would appreciate it if anyone could enlighten me on them.

Harvey F. Kolodny, B.Eng.5

Note: Our columns are open for debate on the above subject. Any contributions must be typewritten and double spaced; we reserve the right to withhold publication. This week the Daily will begin a series on Ghana by the three McGill students who attended the WUS seminar there this summer. Ed.

Medical Conference

characteristics of a Canadian plan and the problems of its administration. He outlined the steps taken by the federal government towards the establishment of a program of financial aid for hospital operation.

Problems of Taxpayer

"There is only one taxpayer, but there are three levels of government, each trying to get what they can from him," said Dr. R. P. Vivian, M.P., who is Chairman of McGill's Department of Health and Social Medicine. Dr. Vivian, advocating a moderate attitude towards national health plans, stressed the need of avoiding "hidden" taxes to pay for such plans.

Dr. O. W. Anderson, Research Director of the Health Information Foundation, spoke on the social and economic factors affecting present trends. He emphasized the fact that the problems encountered were the same regardless of the sponsorship.

Dr. Charles Halpenny, of the Canadian Medical Association, replaced Dr. A. D. Kelly, who was unable to attend because of illness. Dr. Halpenny reported the attitude of the C. M. A. as favourable to the extension of health insurance plans to cover all of Canada, including payment of premiums by the state for those who cannot afford to pay them.

Yanks Give \$12,000 to Aussie University

The Education Department of the University of Sydney has received a grant of 12,000 dollars from the Carnegie Corporation of New York to enable it to conduct research into the relationship of the university to the community. This will be an extension of research already begun by the department into the relationship of the university to its graduates. The grant will make it possible for the department to undertake an experimental study of the attitudes held by adults of the city of Sydney about the nature and functions of their university.

Student News Around The World

Jazz Behind the Iron Curtain

The Polish student jazz bands Janusz Zabieginski (Warsaw), Modern Combo (Warsaw), Koliber (Kattowitz) and Hot 7 (Lodz) were represented at the Second Jazz Festival held in Zoppot from July 14 to 21 in which, in addition to Polish jazz orchestras, there participated also guests from Prague, Berlin, Frankfurt on the Main and Hungary.

Cuban Student President Jailed

Vice-president Ramón Prendas Varela, who recently took over the Presidency of the Federación Estudiantil Universitaria de Cuba (FEU) is at present detained in the cells of the Cuban mili-

tary intelligence service. Although he has applied for Habeas corpus, he has not yet been indicted in any court of justice. Prendas Varela had automatically succeeded Fructuoso Rodríguez in the presidency when the latter was killed, together with a number of other students, by the police. In his turn, Rodríguez had been the successor of José Antonio Echeverría, also killed by the police in Havana. Despite these events, FEU has reorganized its leadership underground, for the third time in three months. The present President is Omar Fernández Milanés, who is in hiding. All the student leaders are sought by the police; when arrested they are put in jail and subjected to the most severe treatment.

"Where Quality Counts"

Four Records Smashed In McGill Track Meet

by Sidney Margles

Four records were shattered yesterday as the annual Intra-mural and McGill championship track and field meet was run-off at Molson Stadium.

Gavin Southerland, a 4th year Med student from California, led the parade of new marks as he bettered his own in the 16 pound shot and beat that of A. Limonchik in the Discus which was set in 1951. Southerland threw the shot 41 ft. 7 in. to better the previous mark of 40 ft. 11½ in. In the Discus, he bettered his own mark by 4 feet as he flung the Disc a total of 119 ft.

John Whalen, another Med student, set a new University mark for the Pole Vault as he topped the 11 ft. 11½ in. mark. The previous record was set in 1949 and stood at 11 ft. 1 in.

In the High Hurdles, J. Roland clipped off 9 seconds from the former record as he took the race in 16.2 seconds. The previous mark was set in 1950 by A. Raymond.

The faculty winner will not be announced until later today when all the results will be tabulated, for point awarding.

The showing of several of the participants in the meet was carefully observed and it is expected that some of the entrants will gain a berth on the Inter-collegiate squad when it makes its trip to the Quadrangular meet in Toronto on the 23rd of the month.

Women's Sports

WOMEN'S TENNIS TOURNAMENT

A redraw of the Freshie and Upper-class tournaments has been made and the following matches are to be played by Oct. 10 at 5 p.m.

The second student named is responsible for getting in touch with her opponent. The winner must record the results of the match as soon as the game is over.

Best two of three sets should be played to determine the winner.

Ann Lafleur vs. Sherrill Newman
Evelyn Ellis vs. Barbara Richards
Judy Rochester vs. E. Tie

Pat Stanfield vs. Jeannette Baird
Marian MacDougall vs. Sylvia Jackson
Jessie Allbright vs. Marian Jacobson

Lorraine Brender vs. Judy Muir
Dorothy Blake vs. Paula Goode

Any problems arising should be referred to Anne Kindersly, Manager PL. 0044, or Miss Bean VI. 5-7518.

INTRAMURAL GOLF TOURNAMENT

The girl's intramural golf tournament will be held on Friday, Oct. 11th at Royal Montreal Golf Club. Departure time from R.V.C. will be at 8:45 a.m.

All girls who are interested and have not been contacted please call Adery Patton at El. 1701 or VI. 5-7911.

INTRAMURAL SWIM MEET

The women's intramural swim and dive meet was held Tuesday Oct. 8th in the Memorial Pool, Currie Gym. The meet was won by Phys. Ed with 40 points followed by Science with 31 points and Arts with 19 points.

Individual first place winners were as follows: Lorna Green breast and back stroke; Di Matheson, heading two free style races; Margaret Van Duzer — back stroke; Rose Rochman — Butterfly; Judy Rochester — side stroke; and Pauline McCullagh — diving.

Next Tues. Oct. 15th, there will be a Synchronized Swim Meet and all girls are asked to support their faculties.

Further information may be found at either R.V.C. or Currie Gym.

The first watershow meeting is to take place on Thursday Oct. 10th at 4:00 p.m. in the R.V.C. common room.

Anyone interested in participating in the watershow either as a swimmer or technical advisor is most welcome to attend.

Last year's show, Heavens Above, was one of the best ever produced with about 120 taking part in the production. In all, there were 20 numbers in this spectacular show. The swimming is not very difficult and most large numbers do not consist of tricks but rather precision swimming so that everyone's motions are absolutely synchronized to the music.

84 Year Old Widow Seeks Degree In Latin And English

ITHACA, N. Y., Oct. 5 — Sixty years ago a girl graduate student at Cornell University decided not to write a thesis for her Master of Arts degree in Latin and English. The reason was that she was getting married.

Now that same lady, an 84-year-old widow, Mrs. Katherine Lewis Bradley, plans to write the thesis.

Mrs. Bradley lives most of the year in Tallahassee, Fla. and spends her summers in Spencer, N. Y., near Ithaca. She lives alone in Florida and is interested in literature, particularly the classics.

Early this fall Mrs. Bradley discovered that she had fulfilled all the requirements for an advanced degree except the writing of the thesis and an oral examination. She decided to write the thesis and has conferred with Cornell officials about it. She will also take the examination.

"I didn't write my thesis then (in 1897)," she said recently, "because I decided I wouldn't go on with my teaching after all."

Mrs. Bradley has not yet chosen her thesis topic. "I think," she has said, "it will probably deal with 'pax' (peace) in Livy, or perhaps with 'Tacitus.' Tacitus and Livy were Roman historians whose ideas on peace interest her.

Mrs. Bradley will use the library of Florida State University, Tallahassee, in preparing her thesis. Two of her grandsons are students there. Last year she wrote and delivered, before a church group, a four-hour talk on minor Hebrew prophets.

Science Fiction Film

The film, "The Day The Earth Stood Still" will be shown in the Physical Sciences Centre Auditorium on Friday, October 11, at 5:00 p.m. and 8:00 p.m. All McGill students are welcome to attend this showing sponsored by the McGill Science Fiction Society. Admission free.

GRADUATE PHOTOS

All students in the graduating year of Dentistry and Medicine may now have their Annual photos taken at Geraldine Carpenter Studios, 1487 Bishop St. Students are requested to have this done as soon as possible. They may go any time during the day, no appointment is necessary. There is a charge of \$3.50 a sitting.

THURSDAY, OCTOBER 10

CANTERBURY CLUB: Know your Faith Series. Study group on Christian Belief from 1-2 p.m. at 3479 University St. Bring lunch.

C.I.C.: Opening meeting in the main lecture room of the Chemistry building at 1 p.m. Program for the year will be outlined. Dr. R.V.V. Nicholls, Dept. of Chemistry, will give a short talk. Bring your lunch.

C.U.S.: Regular meeting in the Workshop at 1 p.m.

DEBATING UNION: The second lecture in the Novice and Junior Training Programme will be given at 1 p.m. today by Mary Gomeroff in the Walter M. Stewart room. All novices and juniors should attend and all interested students are welcome.

HILLEL: Brief Succoth Services and Kiddush in the Succah 12 Noon and 1 p.m. at Hillel House.

FRIDAY, OCTOBER 11

COSMOPOLITAN CLUB: The first general meeting of the year will be held at 8:00 p.m. followed by a free "Welcome Back" Dance. Come and enjoy yourself to the music of Los Calientes.

HILLEL: Brief Succoth Services and Kiddush in the Succah 12 Noon and 1 p.m. at Hillel House.

LUTHERAN STUDENTS' ASSOCIATION: There will be a meeting to discuss club organization, led by Rev. Nevell in S.C.M. House, 3625 Oxenden Ave. Refreshments will be served. All welcome.

Rugger Notice

There will be a rugger practice today at 7:30 at the stadium. All those interested in attending should be at the gym at 7:00 o'clock when equipment will be given out.

McGill Indians Lose 19-6

by Jerry Lefson

The fighting Indians lost their first league game of the season as they went down in defeat to the Point St. Charles Bombers by the score of 19-6.

The Bombers drew first blood as Simmons and Bauman went over for the majors. They added one convert and made the first quarter score 13-0.

McGill came back in the second quarter with their defences tightened and held back the Blue Bombers ground attack. The Red and White then took to the air and Daishun floated a pass out to McComb in the end zone for their only score in the game. Tingley missed the convert.

In the second half McGill came back like a ball of fire. Everything they did seemed to work out, that is until they caught sight of the goal posts: Whenever they came within striking

distance they lost the ball on downs. McGill had great success in this quarter and always seemed to be able to move the ball within the ten, but never much farther.

On the fourth play after the kickoff Daishun found himself deep in Bombers territory and decided to let go with one of his infrequent passes. As luck would have it he did something that he could probably not do again if he

wanted to. He floated out a beautiful pass that hit the goal post.

As time started to run out in the game the Red squad went to the air and were in seventh heaven when Daishun connected for a twenty yard gain. The next play though saw the breaks go against McGill as the Bombers pulled off a beautiful interception play deep in their own side of the field. This was curtains for the Indians as two plays later Bobby Yee went 80 yards for the TD.

Soccermen Ruggermen Win 8-0 Lose 16-3

The McGill soccer squad completely outplayed the MacDonald College Aggies to the tune of 8-0 last night on the upper field. The McGill goals were scored by inside right Cambell with three, center Berry with three, and outside left Steed with two. However it must be pointed out that this victory was strictly a team effort. Rigby, at right half, brilliantly set up plays, while Carver played a rugged game at center half. Lindo, the goaler didn't have too much work to do, but he handled the few shots he had adequately.

The McGill forwards kept the Aggies bottled up in their end for most of the game. Although the Aggie defense played well, they could not overcome the constant pressure. Patsion, despite the eight goals scored against him, played well as did inside right, Shaw. The Aggie forwards didn't make use

The Red and White rugger team, who played for the first time as a unit on Tue. night, was outrun, outkicked, and on the whole, outplayed by a more co-ordinated Irish squad. But the 16-3 score of the game does not tell the whole story. The first half saw the Redmen putting up a fine showing in a hard fought, closely played half. At the end of the half the score stood at 3-3. In the second half, though the team was still infested with spirit and the desire to win, but they just seemed to run out of steam as the Irishmen scored 13 points and kept our boys scoreless.

of their opportunities and failed to keep the ball in McGill's end of the field.

This marks McGill's third consecutive victory and they should be much stronger with a few more games under their belts.

Intramural Men's Sports

STUDENT SEASON FOOTBALL TICKETS

Students Football Tickets are still available at Room 3 in the Currie Gym.

MCGILL OUTING CLUB

The McGill Outing Club is having a big week-end for Thanksgiving at their house in Shawbridge. During the day-time there will be rock-climbing, and hiking. Saturday night chickens will be roasted outside and a huge square dance will be held afterwards. Be sure not to miss this great week-end. Memberships for \$1.00 may be obtained at the Gym (Room 3).

Give that man a B.Sc.

Once upon a primeval time, there lived a man of great genius. Knowing less than today's five-year-old children know, he invented the wheel. He could not have discovered it, for a wheel does not happen by accident. His was an act of pure reason, an invention: bold, imaginative, sudden. By making it, this man of genius made all things possible.

From his rough model, we have built a world of wheels. We could not now support our multi-billion population without them. This message could not have been printed. Canadian Allis-Chalmers could not supply its processing and electrical equipment to industry, and industry itself could not exist to use it. Honour then, this primitive man, for he was greater than a thousand Caesars.

Canadian
Allis-Chalmers
Limited

P.O. Box 37, Montreal, Que.

The opportunity to contribute exists today as much as it did in the Stone Age. Engineering graduates will find unlimited opportunities in the creative teamwork that is Allis-Chalmers.
